

## TANK SERVICING

Commercial or residential aquariums and ponds require scheduled maintenance to preserve the health of the inhabitants and the beauty of the display.

### Each service visit includes:

- Clean exterior and interior aquarium surfaces
- Siphon debris from gravel bottom
- Change chemical filtration media as needed
- Clean overflow filtration pads
- Empty Protein Skimmer collection cup
- Clean covers and light fixtures of algae and salt deposits
- Remove and clean decorative corals, rocks, plastic plants and ornaments as needed
- Check food inventory
- Check color, smell and temperature of water
- 25% water change
- Visual check of equipment, air and water flow
- Visual check of fish for head count, disease, swimming and breathing rates

**To reduce the stress on your salt water fish – water will be premixed to the correct salinity levels and dechlorinated prior to introducing it to the aquarium.**

With maintenance out of the way all you need to do is add food as needed, relax and enjoy your living work of art.
